• mcmaste1@msu.edu
• 57 N. Medical Park Dr. Box 105
  Fishersville, VA  22939
• Physician Clinical Support System Mentor,
  SAMHSA,  www.PCSSmentor.org
Why be concerned about your controlled substance prescribing practices?
• Epidemiology- we have a staggering epidemic of prescription substance misuse
• Lethality- many people are dying due to substance abuse
• Cost- the price of substance misuse is a major contributor to the national debt
• Legality- prescribers are being scrutinized regarding their prescribing practices
• Pain continues to be poorly managed
• Prescriber Burn-Out
Epidemiology

• While there are more opioid deaths in SW Virginia, no part of the state is immune to the Substance Abuse Epidemic
  – Equal amounts of abuse throughout the state
  – More lethal substances being used in SW Virginia
Lethality

• In 2006, 12.5/100,000 Virginians died in MVAs*
• In 2007, 11.3/100,000 Virginians aged 35-54 died due to drug poisoning (most polypharmacy deaths involving opioids)**
• opioid dependent patients 13x more likely to die than their age- and sex- matched peers in the general population***
• “Among people age 35 to 54 years old, unintentional poisoning surpassed motor vehicle crashes as the leading cause of death in 2005”****

Cost

• Treated and untreated substance use including ETOH: 62 Billion dollars in 2008 for healthcare alone (more in crime and welfare costs)*

• Audit of five large states 2006-7 found 65,000 Medicaid recipients improperly obtained potentially addictive drugs- $65 million dollars**

• 938,586 urine drug screens from over 500,000 patients prescribed chronic opiates showed only 25% taking their medications as directed***

Legality

• The DEA **IS NOT** out to get you.
• The State Board of Medicine **IS NOT** listening outside your door

**HOWEVER**

You **CAN** get into trouble for failing to practice good medicine when prescribing controlled substances
From a VA Board of Medicine’s Order of Summary Suspension 8/19/2009

- Dr. X prescribed BNZs and narcotics…without an adequate medical indication or diagnosis, developing and adequate treatment plan, performing urine drug tests… commenced prescribing narcotics without obtaining prior treatment records to verify……

- Dr. X failed to appropriately respond to signs that the patient was misusing or abusing his medications (controlled substances)

- Failure to refer for substance abuse treatment

- Dr. X prescribed Suboxone to treat the patient’s narcotics addiction even though he was not qualified or registered to dispense narcotic drugs for addiction treatment as required by Federal law and regulation (Controlled Substance Act of 1970, 21 U.S.C.801 et.seq. and Federal Regulations 21 C.F.R. 1306.04 and 1306.07).
THE GOOD NEWS

• Substance Abuse and Diversion are preventable
• Addiction is treatable
• Health Care Reform includes measures to address the Addiction epidemic
OUR COMMUNITY...OUR RESPONSIBILITY

Appalachian Substance Abuse Coalition for Prevention & Treatment
DEFINITIONS

– Physiological Adaptations to Medications
  • Tolerance
  • Withdrawal

– Substance Misuse Disorders
  • Diversion
  • Substance Abuse
  • Addiction
A=Addiction
P=physical tolerance, withdrawal
Physical Adaptations

• Tolerance and Dependence
  – PHYSICAL
  – Physiological adjustment to MANY medications
    • Anti-depressants
    • Anti-hypertensives
  – NOT the same thing as addiction
Factoid

• It is **AGAINST THE LAW** to detoxify a patient addicted to opioids by using other opioids (unless the reason is to treat a separate medical condition).

• Detoxification only treats the physical dependence, NOT the Addiction.

• Patients who are detoxified lose their tolerance to respiratory depression.

• When they resume substance use, they are likely to die.

*Heit HA; Dear DEA, Pain Medicine Vol 5 #3, 2004, 303-308*
Substance Misuse Disorders
DIVERSION

• Obtaining mood altering substances under false pretenses and diverting them to other people
  – To get high
  – FOR PROFIT.

• DIVERSION IS BIG BUSINESS!!!!!
SUBSTANCE ABUSE

• “the substance use is continued despite knowledge of having a persistent or recurrent physical or psychological (or social or occupational) problem that is likely to have been caused or exacerbated by the substance.”
ADDICTION

• “the substance use is continued despite knowledge of having a persistent or recurrent physical or psychological (or social or occupational) problem that is likely to have been caused or exacerbated by the substance.”

» AND

• “persistent desire or unsuccessful efforts to cut down or control substance use.”
What Makes a Substance Addictive or Psychoactive or Reinforcing or Abuseable???
Natural Rewards

Food
Water
Sex
Nurturing
What is needed to trigger the natural reward center (elevate Dopamine) in the Forebrain?

• The substance must get into the blood
• The substance must cross the blood-brain barrier and get into the brain
• The substance must elevate Dopamine in the forebrain
How Quickly can you get chemicals into the blood?

- Swallowing- VERY Slow
- Rub on Mucosa- Slow
- Inhale- Fast
- Inject into Blood- VERY Fast
Well, This Is One Way Around That Pesky “Slow Release”

Abused Oxycontin
Once Inside the Brain, What do Substances of Abuse DO?

• Trigger the Natural Reward System
  – Increase Dopamine in the Forebrain
    • The FASTER
    • The HIGHER
    – THE MORE ADDICTIVE

• MANY more things than Abused Substances can trigger this system
Which Substance, A B C or D, is the most Addictive?

A- Heroin, inhaled cocaine, Abused Oxycontin, Dilaudid
B- Non-altered Oxycontin, Immediate Release Morphine
C- Abused Methadone
D- Methadone, Suboxone

How fast the substance gets into the brain (fast to slow)
Street Value

- 100 Vicodin $500-$800
- 100 Xanax 2mg $1,000
- 4 Fentanyl patches 100ug $400
- 100 Dilaudid 8mg $4-8,000
- 100 Oxycontin 80mg $8-16,000
- Methadone 1$ per milligram

* Beard, J Tobias, “Coke is the Real Thing; Fifty bucks and you’re in with Charlottesville’s favorite powder”, C’VILLE CHARLOTTESVILLE NEWS & ARTS, 2/11/2008
Non-controlled substances with street value

- Muscle Relaxants
- Remeron
- HIV medications
- Prednisone

*It’s not about the Substance. It’s about the Brain.*
Source Where Pain Relievers Were Obtained for Most Recent Nonmedical Use among Past Year Users Aged 12 or Older: 2006

Source Where Respondent Obtained

- One Doctor: 80.7%
- More than One Doctor: 3.3%
- Bought/Took from Friend/Relative: 14.8%
- Drug Dealer/Stranger: 3.9%
- Bought on Internet: 0.1%
- Other: 4.9%

Source Where Friend/Relative Obtained

- One Physician: 55.7%
- More than One Doctor: 3.3%
- Free from Friend/Relative: 7.3%
- Bought/Took from Friend/Relative: 4.9%
- Drug Dealer/Stranger: 2.2%
- Other: 1.6%
What Changes Does Addiction Make to the Brain?
ADDICTION IS NOT SUBSTANCE SPECIFIC!!!
In Animals AND Humans

• Addiction IS NOT Substance Specific
  – Preferences
  – Can’t get one, will abuse the other

• Stereotypical patterns of behavior
  – Stimulant “runs”
    • Picking
  – Constant Use Patterns
  – Subtypes
    • Alcohol
      – Constant Use
      – Binge
What do you need to develop the disease of addiction?

• Genetic Predisposition
  AND
• Exposure to Psychoactive Substances
Animal studies

Rat with Addiction

GENES

Rat without Addiction
Rat with Addiction
Genetic Predisposition

• Some people get a lot of genetic predisposition
  – Some American Indian nations
  – 60% inherited

• Some people don’t have any genetic predisposition
  – CANNOT become addicted
  – CAN become physically dependent
Exposure to Psychoactive Substances

• Long exposure to substances with low addictive potential
  – Many years of social drinking
    • Usually progresses from social to problem to addiction

• Short exposure to substances with high addictive potential
  – Snort cocaine, shoot heroin (or altered oxycontin)
Can people given pain medications for “real” pain develop the disease of Addiction?

YES!!!

Does that mean you shouldn’t treat patients with Addiction, or the genetic predisposition to develop Addiction, opioid pain Medication?

NO!!!
Where to start?

First: KNOW WHAT YOU DON’T KNOW!!!

- Pain
  - Virginia Department of Health Professions
    [http://www.dhp.state.va.us/dhp_programs/pmp/default.asp](http://www.dhp.state.va.us/dhp_programs/pmp/default.asp)
  - AMA

- Diversion, Substance Abuse and Addiction
  - American Society of Addiction Medicine
    - Suboxone Waiver course (you don’t have to prescribe to take the course)
  - SAMHSA
  - Federation of State Medical Boards
PCSS…

- answers questions about opioids, including methadone, for treatment of chronic pain
- answers questions about use of buprenorphine for treatment of opioid dependence
PCSS…

- is free, for interested physicians and staff
- is supported by SAMHSA through the Center for Substance Abuse Treatment (CSAT) and administered by the American Society of Addiction Medicine (ASAM)
Ask a clinical question...

• get a response from an expert PCSS mentor
  – on line by email  PCSSproject@asam.org
  – by phone 877-630-8812

From www.PCSSmentor.org...

• download clinical tools, helpful forms and concise guidance's (like FAQs) on specific questions
Where to start?

Second: Universal Precautions for Prescribing Controlled Substances (not just opioids, but ALL Controlled Substances)

– Every Patient
– Every Time
– No Exceptions
  • Not even your grandmother
Universal Precautions for Prescribing Controlled Substances

1. Have a “real” diagnosis: check the labs, look at the x-rays, read the consultant reports

2. Try the less risky interventions first: PT, NSAIDS, etc.  *TREATING PAIN WITH NON-NARCOTIC INTERVENTIONS IS TREATING PAIN.*
3. Get informed consent: Controlled Substance Agreement
   – Include Prescription Monitoring Program
4. UDS
   – Protects the patient AND YOU
   – Every patient
   – See Algorithm for frequency
Con’t

5. Assess Risk Factors for Substance Misuse Disorders
   – Family History
     • Addiction is a GENETIC disease
   – Current Addiction
     • Smoking
   – Behaviors symptomatic of a Substance Misuse Disorder
     • Legal problems, MVAs, DUIs, etc
Con’t

6. Assess Functioning

7. Time limited Trial
   – Expectations
     • No problematic behavior
     • IMPROVED FUNCTIONING

8. Exit Strategy
   – See Algorithms

9. Periodic Reassessment
10. Prescribe the fewest number of pills possible with the lowest abuse potential

• DOCUMENT, DOCUMENT, DOCUMENT
THE BOTTOM LINE:

FUNCTIONING

• IF YOU ARE TREATING PAIN, FUNCTIONING GETS BETTER
• IF YOU ARE FEEDING AN ADDICTION, FUNCTIONING GETS WORSE
Urine Drug Screens

• For the BENEFIT of the patient, the physician and society
• NOT to “catch” people doing bad things
• Provide a “teachable” moment
  – Risks of substance abuse
  – Diagnose addiction and refer for treatment
UDS

• A few details about UDS:
  – Each laboratory is different
    • ALWAYS call and clarify unexpected results
  – They are very seldom WRONG
  – It never hurt anyone to pee in a cup
UDS

• WOULD YOU PRESCRIBE COUMADIN WITHOUT CHECKING AN INR?

• WOULD YOU PRESCRIBE INSULIN WITHOUT CHECKING A BLOOD SUGAR?

• THEN **DON’T** PRESCRIBE CONTROLLED SUBSTANCES WITHOUT DOING UDS
TREATING ADDICTION

• THE MAINSTAY OF ADDICTION TREATMENT IS ABSTINENCE COUNSELING

• 12 STEP PROGRAMS ARE EFFECTIVE AND COST EFFECTIVE
  – FREE
  – WIDELY AVAILABLE

• MEDICATIONS AS ADJUNCT
MEDICATION ASSITED ADDICTION TREATMENT- primarily decrease cravings

- Medication- (FDA approved)
  - Nicotine
    - Varenicline
    - Nicotine Replacement
  - Alcohol
    - Acamprosate
    - Antabuse
    - Naltrexone (pills and injections)
  - Opioids
    - Methadone (Methadone Maintenance Therapy- MMT)
    - Buprenorphine
REMEMBER THAT ADDICTION IS A CHRONIC LIFELONG DISEASE

If your “recovering” patient isn’t utilizing abstinence counseling, s/he ISN’T recovering.
From a VA Board of Medicine’s Order of Summary Suspension 8/19/2009

• Dr. X prescribed BNZs and narcotics...without an adequate medical indication or diagnosis, developing an adequate treatment plan, performing urine drug tests... commenced prescribing narcotics without obtaining prior treatment records to verify..............

• Dr. X failed to appropriately respond to signs that the patient was misusing or abusing his medications (controlled substances)

• Failure to refer for substance abuse treatment

• Dr. X prescribed Suboxone to treat the patient’s narcotics addiction even though he was not qualified or registered to dispense narcotic drugs for addiction treatment as required by Federal law and regulation (Controlled Substance Act of 1970, 21 U.S.C.801 et.seq. and Federal Regulations 21 C.F.R. 1306.04 and 1306.07).

UNIVERSAL PRECAUTIONS FOR PRESCRIBING CONTROLLED SUBSTANCES: EVERY PATIENT, EVERY TIME

- Ask for picture identification. Confirm the diagnosis: check the labs, look at the x-rays, read the consultant reports.
- Try the less risky interventions for pain first: PT, NSAIDS, etc. TREATING PAIN WITH NON-NARCOTIC INTERVENTIONS IS TREATING PAIN.
- Get informed consent: Controlled Substance Agreement. This should always include permission to query the Virginia Prescription Monitoring Program.
- Do a UDS. This protects the patient AND YOU.
- Assess Risk Factors for Substance Misuse Disorders
  - Family History (Addiction is a GENETIC disease)
  - Current Addictions (This includes smoking)
  - Behaviors symptomatic of a Substance Misuse Disorders (Legal problems, MVAs, DUIs, etc)
- Assess Functioning
- Do a Time limited Trial (Expectations: No problematic behavior, IMPROVED FUNCTIONING)
- Have an Exit Strategy
- Periodic Reassessment
- Give the fewest number of pills possible with the lowest abuse potential
- DOCUMENT, DOCUMENT, DOCUMENT

THE BOTTOM LINE:
FUNCTIONING
IF YOU ARE TREATING PAIN, FUNCTIONING GETS BETTER
IF YOU ARE FEEDING AN ADDICTION, FUNCTIONING GETS WORSE

Adapted from Gourlay                                           Mary G. McMasters, MD
